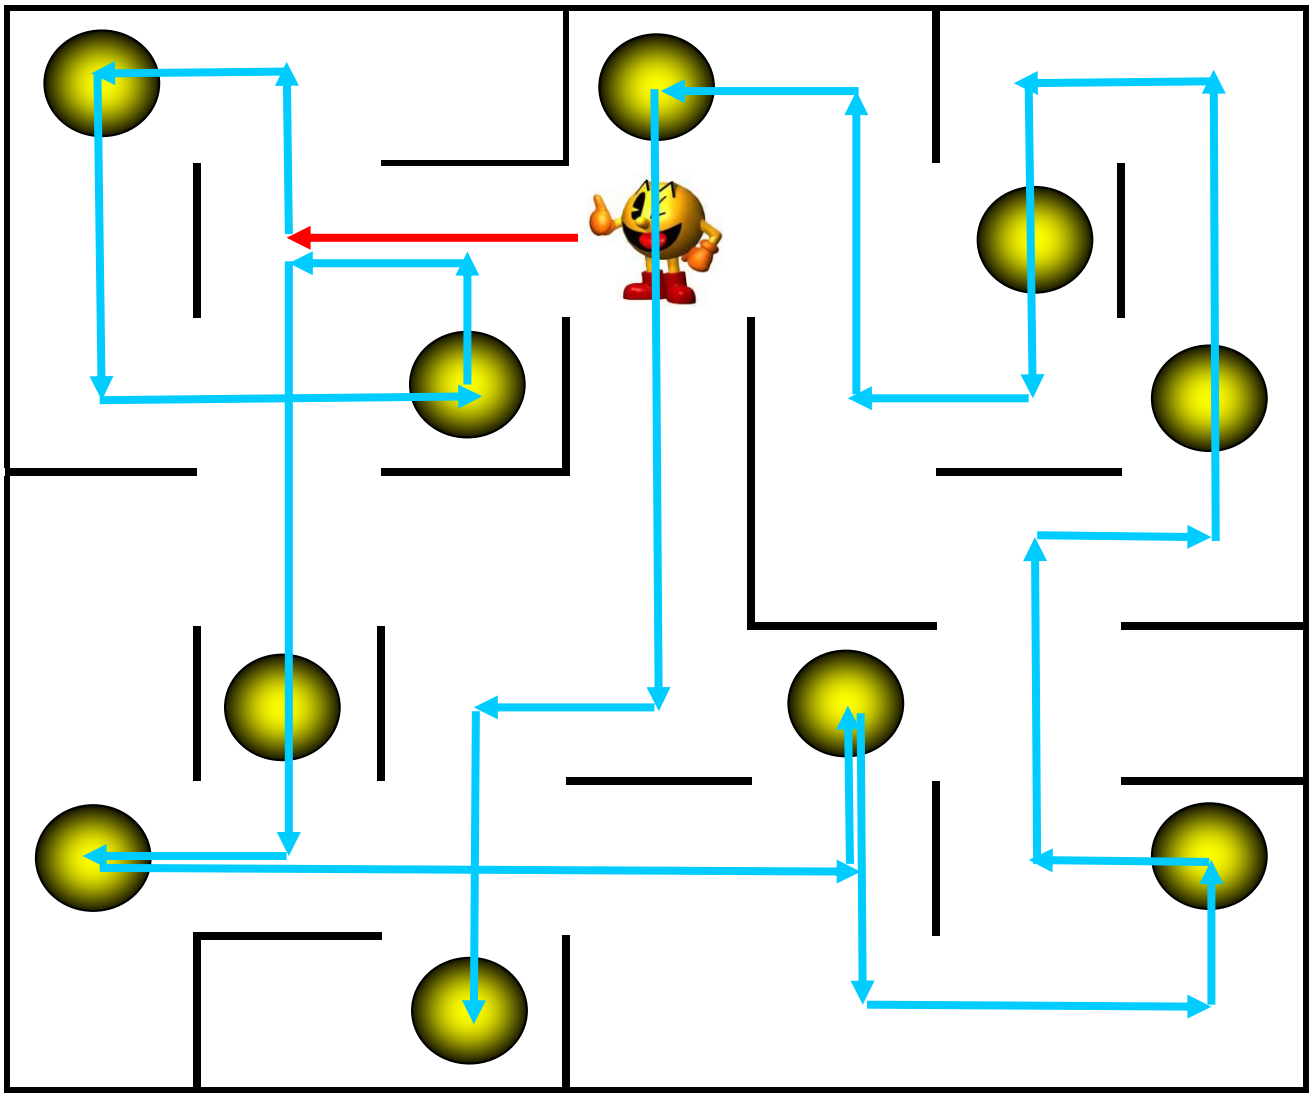
Leading the (Blind) Pac

Pacman Needs your help! It seems that he has gone blind in one eye (hence his wink) and needs your guidance around the maze in order to pick up all of the food-pellets. You can move him in any direction in the maze, but there are two rules: (1) He is unable to go through walls and (2) he can only stop when he hits a wall. (That is, he cannot be stopped in the middle of a hallway to make a turn). Once he hits a wall and is stopped, you can move him again and change direction. Can you get him to pick up all of the pellets?



(P.S. After a try of two, we were able to do it in 26 moves…can you get it done in 26 moves the first time your pen hits the paper? *This* makes it Medium Difficulty ☺ .)
